Project	Enterprise Sales Operations & Business Analysis Platform

1. Background

The Sales Operations department currently prepares operational reports using multiple Microsoft Excel workbooks received from regional sales teams. As business volume has increased, the manual reporting process has become increasingly time-consuming and difficult to maintain. Management requires timely and accurate operational insights to support business decisions; however, the current reporting process lacks standardization and centralized reporting capabilities.

2. Current Business Process

The current reporting process consists of the following activities:

1. Regional sales teams submit Excel reports.
2. Operations team manually consolidates multiple spreadsheets.
3. KPI calculations are performed manually.
4. Reports are validated by operations staff.
5. Final reports are shared with management.

3. Current Challenges

ID	Business Challenge	Business Impact
BP-01	Manual report preparation	Increased reporting time
BP-02	Duplicate operational records	Reduced reporting accuracy
BP-03	Inconsistent KPI calculations	Incorrect business insights
BP-04	Multiple Excel sources	Difficult data consolidation
BP-05	Limited dashboard visibility	Slow decision making

4. Business Impact

The current reporting approach results in:

- Delayed management reporting
- Increased manual effort
- Inconsistent KPI calculations
- Reduced confidence in operational reports
- Limited visibility into sales and product performance
- Difficulty identifying business trends

5. Proposed Business Need

The organization requires a centralized reporting and business analysis solution that standardizes operational reporting, improves KPI accuracy, and provides interactive dashboards for management. The solution should support data-driven decision-making while reducing manual reporting effort through standardized analytical processes.

6. Expected Benefits

Benefit	Expected Outcome
Centralized Reporting	Standardized operational reports
Improved KPI Accuracy	Consistent business metrics
Faster Reporting	Reduced manual effort
Dashboard Visibility	Better operational monitoring
Improved Decision Making	Data-driven management decisions

7. Business Problem Summary

The implementation of a centralized Business Analysis and Operational Analytics platform will improve reporting efficiency, standardize KPI calculations, enhance operational visibility, and support better business decisions through structured analytics and dashboard reporting.
