

ESOBAP-30 – Conduct User Acceptance Testing (UAT)

1. Purpose

Overview

The purpose of this user story is to conduct User Acceptance Testing (UAT) for the Business Intelligence solution. UAT validates that the dashboards satisfy the approved business requirements and provide meaningful, accurate, and actionable insights for business stakeholders.

The testing confirms that the solution is suitable for business use and ready for production deployment.

2. Business Requirement

Business stakeholders require formal validation that the Business Intelligence solution supports operational reporting and decision-making before production deployment.

The UAT process must verify that:

- Business requirements have been fulfilled.
 - Dashboard information is accurate and meaningful.
 - KPI calculations align with business expectations.
 - Dashboard navigation is intuitive.
 - Interactive filters function correctly.
 - The solution supports business decision-making.
-

3. Business Problem

Although the dashboards successfully passed functional testing, the solution must also be evaluated from a business perspective. Technical correctness alone does not guarantee that the reports meet user expectations or support business processes effectively.

Without User Acceptance Testing, business users may identify usability or reporting issues after deployment.

4. Solution Overview

User Acceptance Testing was conducted using predefined business scenarios that reflect typical reporting activities performed by business stakeholders.

Business users reviewed:

- Executive KPI Dashboard
- Sales Performance Dashboard
- Product Performance Dashboard

The dashboards were evaluated for data accuracy, usability, reporting completeness, and overall business value.

5. UAT Scope

The following dashboards were included in User Acceptance Testing:

Dashboard	Status
Executive KPI Dashboard	Included
Sales Performance Dashboard	Included
Product Performance Dashboard	Included

Business users validated:

- KPI accuracy
 - Dashboard usability
 - Interactive filters
 - Product analysis
 - Regional analysis
 - Profitability analysis
 - Overall reporting quality
-

Figure 5.2 – User Acceptance Testing of Business Intelligence Dashboards

Figure Description

Figure 5.2 illustrates the Business Intelligence dashboards evaluated during User Acceptance Testing (UAT). Business stakeholders reviewed dashboard functionality, KPI accuracy, interactive reporting features, and overall usability to confirm that the solution satisfies business requirements and is ready for production deployment.

7. UAT Activities

Activity	Objective
Dashboard Review	Verify dashboards meet business requirements
KPI Validation	Confirm business metrics are accurate
Filter Validation	Verify interactive filtering functionality
Business Scenario Testing	Validate reporting using common business scenarios
User Feedback Collection	Capture stakeholder observations
Final Acceptance	Obtain business approval for deployment

8. UAT Environment

Item	Details
Reporting Tool	Google Looker Studio
Database	MySQL
Dataset	Enterprise Sales Dataset
Test Environment	UAT Environment
Participants	Business Analyst, Business Stakeholders

9. Acceptance Criteria

The solution is considered accepted when:

- All critical business requirements are satisfied.
- KPI values are accurate.
- Dashboards are easy to use.
- Interactive features operate correctly.
- No Critical or High priority issues remain.
- Business stakeholders approve the solution.

10. Business Value

User Acceptance Testing provides confidence that the Business Intelligence solution delivers meaningful business insights and supports informed decision-making. Formal stakeholder approval reduces deployment risk and confirms readiness for operational use.

11. Validation

The UAT process included:

- Review of business requirements.
- Validation of KPI calculations.

- Execution of business scenarios.
 - Verification of dashboard usability.
 - Collection of stakeholder feedback.
 - Final acceptance review.
-

12. Recommendations

- Conduct periodic UAT after major dashboard enhancements.
 - Gather user feedback for future dashboard improvements.
 - Expand reporting capabilities based on business needs.
 - Schedule regular review sessions with business stakeholders.
-

13. Deliverables

- User Acceptance Test Plan
 - UAT Test Scenarios
 - UAT Test Cases
 - UAT Execution Report
 - Business Feedback Log
 - UAT Sign-off Document
-

14. Approval Status

Item	Status
UAT Planning	✓ Completed
Business Validation	✓ Completed
User Feedback	✓ Collected
Business Approval	✓ Approved
Ready for Production	✓ Approved
