

Sprint 3 Review

Sprint Information

Item	Details
Sprint	Sprint 3
Duration	SQL Analytics & Business Reporting Sprint
Sprint Goal	Generate business insights using SQL analytics and prepare dashboard-ready datasets.
Sprint Status	Completed

Sprint Goal

The objective of Sprint 3 was to perform SQL-based business analysis on the validated enterprise sales dataset, generate executive KPIs, produce analytical reports, optimize SQL queries, and prepare a reporting dataset for Looker Studio dashboard development.

Completed User Stories

Story ID	Story	Status
ESOBА-16	Executive KPI Report	✔ Completed
ESOBА-17	Monthly Sales Trend Analysis	✔ Completed
ESOBА-18	Regional Performance Analysis	✔ Completed
ESOBА-19	Product Performance Analysis	✔ Completed
ESOBА-20	Profitability Analysis	✔ Completed

ESOB-21	SQL Query Optimization	✓ Completed
ESOB-22	Dashboard Dataset Preparation	✓ Completed

Deliverables Completed

- Executive KPI SQL Report
- Monthly Sales Trend Report
- Regional Performance Report
- Product Performance Report
- Profitability Analysis Report
- Optimized SQL Scripts
- Dashboard Dataset
- Google Sheets Reporting Dataset
- Looker Studio Data Source Preparation
- SQL Documentation
- Business Insights Documentation

Major Achievements

- Successfully analyzed the complete **5,000-record** enterprise sales dataset.
- Generated executive-level KPIs for business reporting.
- Developed reusable SQL scripts for business analysis.
- Optimized SQL queries using enterprise SQL best practices.
- Prepared a validated reporting dataset for dashboard development.
- Successfully connected the reporting dataset to Google Looker Studio.

Business Value Delivered

Sprint 3 established the analytical foundation for the Business Intelligence platform by providing validated KPIs, business insights, and dashboard-ready datasets that support executive decision-making.

Challenges Encountered

- Initial MySQL Workbench query limit returned only **1,000 rows**, resulting in incomplete KPI calculations.
 - Looker Studio initially interpreted the `order_date` field as text rather than a date.
 - Dashboard connectivity required dataset validation and ISO date standardization.
-

Resolution

- Increased the MySQL Workbench query limit to retrieve all **5,000 records**.
 - Regenerated all SQL reports using the validated dataset.
 - Standardized the `order_date` field using the ISO (YYYY-MM-DD) format.
 - Connected the validated Google Sheets dataset to Looker Studio successfully.
-

Sprint Outcome

Sprint 3 objectives were fully achieved. The SQL analytics phase produced validated business reports and a dashboard-ready dataset, enabling Sprint 4 to focus on interactive dashboard development.

Sprint Approval

Role	Status
Business Analyst	Approved
Product Owner (Simulated)	Approved
Scrum Master (Simulated)	Approved
